Project Conclusion & Insights:

1. Business Overview:

Based on the dataset, the total revenue generated is approximately \$40.22 Million.

2. Product & Market Performance:

I have created a Bar Chart to show the Top 10 Models by revenue.

The analysis identifies the "**huge**" model as the primary driver of revenue, generating \$282,863.97.

To understand geographic distribution, I analyzed the top locations by revenue.

Lake Amanda is the top location, contributing a significant \$185,827.20 to our total sales.

3.Sales Trend & Future Forecast :

The line chart tracks historical sales and includes a 3-month forecast calculated in Python using Linear Regression.

The forecast (shown as a dashed line) indicates a slight downward trend for the upcoming months. By identifying this early, the business can proactively launch new promotions to maintain revenue levels.
